//doce="Vector: PWAZINY; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qil4732114 qib]AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli Xil0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of a

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC ilbrary was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's pland by the order individual BAC clones, the entire library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBACII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drosophila melanogaster genome survey sequence T7 end of BAC:
BACR31/08 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

/note="The library Gn-Ti070 is a sequence-driven, reracked set of 9,216 clones selected from CDNA libraries from various tissues and stages of development of soybean that represent 2,639 sequences from immature cotyledons, 1,770 from immature seed coats, 3,938 from flowers, and 869 from young pods. The 5' ESTS of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked to
with a modified polylinker; Plasmid DNA from the normalized library NCI_CGAP_Pr22 was prepared and sscircles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool 5,000 clones made from the same library (cloneIDs 985008-98559, 1101192-1101959, and 1217928-1220615). Subtraction by Bento Soares and M. Fatima Bonaldo. " a 140 c 110 g 64 t

Reracking was performed by Genome Systems, St. Louis,
http://www.genomesystems.com, and 3' sequencing by the
Keck Center for Comparative and 3' sequencing by the
Keck Center for Comparative and Functional Genomics,
University of Illinois,
http://www.life.uluc.edu/Diotech/Keck.html. Note: The
corresponding 5' EST from each clone in the Gm-r1070
library is listed in the 'OTHER EST' field. The detailed
information on the source library for each clone can also
be obtained by referring to the Genome Systems clone ID of
the original CDNA library that is also listed under
'OTHER EST'."
form library Gm-r1070. The cDNA clones of the reracked Gm-r1070 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               "Losaes 1 to 523)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                            // Alouges—Nector: pBluescript II SK+; Site_1: ECORI; Site_2:
XhoI; The CDNA library was constructed from mRNA isolated
from 2:3 week old seedings that were induced for symptoms
of SDS (Sudden Death Syndrome) disease by the
translocation of culture filtrate of Fusarium solani f.
sp. glycines (Plant Cell Report 18:375-380). Cultivar
Williams 82 is susceptible to the disease SDS. Plant
tissue (expanded leaves, folded leaves, and new shoots)
were collected at 1, 6, 24, and 48 hrs. after inculation
and their mRNA pooled equally for CDNA construction. The
library was prepared using the Stratagene pBluescript II
SK(+) library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with an XhoI restriction site. EcoRI
adaptors were ligated to the blunt-ended CDNA fragments
followed by XhoI digestion. The CDNA insert is protected
from XhoI digestion via methylation during first strand
synthesis. The CDNA fragments were directionally cloned
into the EcoRI:XhoI restriction site of the pBluescript
vector. The ligated CDNA fragments were transformed into
E.coll Electromax DHIOB host cells. Plants were incculated
by Shuxian Li (Glen Hartman lab, University of Illinois).
Library was constructed by Reema Philip and Steve Clough
(Lila VOAKI lab, University of Illinois).

/note="Vector: pBluescript II SR+; Site_1: EcoRI; Site_2: Xho1; The CDNA library was constructed from mRNA isolated from degenerating cotyledons of 9-10 day old etiolated seedlings for the cultivar Williams. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated CDNA fragments were transformed into DH10B host cells (GlbcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryotta, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, Magnoliophyta; eudicotyledons; core eudicots; Rosladae; eurosids 1; Fabales; Fabaceae; Papillonoideae; Glycine. 1 (bases 1 to 544)

(http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114 [gb]AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /doce=Nector: paluescript II XR; Site_1: EcoRI; Site_2:
XhoI; This cDNA library was constructed from mRNA isolated
from immature flowers of field grown plants. The cDNA
library was prepared using the Stratagene pBluescript II
XR library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoRI-XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into XLIO-Gold host cells. This library was
constructed by Dr. Randy Shoemaker and Dr. John
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                               // Arachinstoner in Strain Allo Volud, in Trenstant, Francius C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 74 DNA polymerase and 74 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil4732114 [gb]ARL25072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored for amplicilla resistance."

                                                                      The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's
                                                                                                                                                                                                             Note: The degenerate codon within the sequence represents the position of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid selected from one of 106 genes comprising single nucleotide polymorphisms, allele-specific oligonucleotides to the genes are useful for phenotypic correlations, forensics, paternity testing,

The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, social concer, autoimmune diseases, Alzheimer's and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid selected from one of 106 genes comprising single nucleotide polymorphisms, allele-specific oligonucleotides to the genes are useful for phenotypic correlations, forensics, paternity testing, medicine and genetic analysis
                                                                                                                                                                     Note: The degenerate codon within the sequence represents the position of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or G.
                                                                                                                                                                                                                                                                                                                                                                            tcgtctcaaaacatgcccctcgagacgtcggtgaagccgtagtttgtacaagactaacaac 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleotide polymorphisms (SNPs) which the inventors identified in human penes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose asseeptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's
used to diagnose susceptibility to diseases of the cardiovascular, endocrine and neurological systems, such as coronary artery disease, schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's
                                                                  Note: The degenerate codon within the sequence represents the position of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or G.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The degenerate codon within the sequence represents the position

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention is concerned with a number of human single nucleotide polymorphisms (SNPs) which the inventors identified in human genes. These SNPs can be used in disease diagnosis and prediction of an individual's susceptibility to disease, in forensic and paternity testing and in genetic mapping. In particular, the SNPs of the invention can be used to diagnose susceptibility to diseases of the cardiovascular,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The degenerate codon within the sequence represents the position of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or G.
of an SNP, for example the letter S represents a polymorphism where the nucleotide may be C or {\rm G}\,.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid selected from one of 106 genes comprising single nucleotide polymorphisms, allele-specific oligonucleotides to the genes are useful for phenotypic correlations, forensics, paternity testing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              schizophrenia, cancer, autoimmune diseases, Alzheimer's and Parkinson's

PDEF gene expression is highest in tissues involved in androgen sensitivity, with enriched expression in prostate epithelium cells. PDEF gene is mapped to the human chromosome 6p21.3 region that is associated with loss of heterozygosity and chromosomal translocations in various human cancers. PDEF has cytostatic, cardiant, immunosuppressive, cerebroprotective, funglcide, antibacterial,

The method comprises detecting a gland-specific Ets transcription factor (GSEP) gene product in a test sample. Detection of a GSEP gene product in the test sample in amount lower than that in a normal cell, is indicative of a cell with high metastatic potential. The method is useful for determining the metastatic potential of a cell, for the diagnosis and prognosis of cancer as well as
vulnerary, neuroprotective, antiparkinsonian, nootropic, anabolic, antiinflammatory and anorectic activity. PDEF polynucleotides are useful in linkage analysis as markers, as hybridisation probes for differential identification of the tissues or cell types and as polymorphic markers for forensic purposes. PDEF is useful as prostate specific tumour marker for the diagnosis and treatment of prostate cancer. PDEF sequences are useful for treating autoimmune disorders, haematopoietic, blood coagulation, immune and nervous system disorders, hyperproliferative disorders like, neoplasms and microbial infections, heart attacks, stroke, scarring and for tissue regeneration. They are also useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting metastatic and potential metastatic cancerous cells, useful for diagnosing, prognosing, grading and staging of cancers by detecting gland-specific Ets transcription factor gene product in a biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tgctgtttaccgtgcagcactcgaagacttccttgctgtactcgctggcagcatagtctg 349

grading and staging of cancers by detecting GSEF expression in a blological test sample. The method may also be used to monitor patients having a predisposition to develop a particular cancer. GSEF polypeptides are useful for producing antibodies, in cancer diagnosis, prognosis, grading, staging and management of breast and prostate tumours, and in detecting polymorphisms in the sequence. GSEF genes and proteins are also useful in gene therapy. GSEP gene product expression levels can be used in conjunction with any tissue in which an alteration in GSEF gene product expression levels is associated with development of a cancer-associated phenotype. Cancers, which can be monitored include adenocarcinomas, wilm's tumour, retinoblastoma, asrcomas, myosarcomas, lung carcinomas, leukaemia, and lymphomas. The GSEF gene is located on human chromosome 6, specifically at 6p21.1-6p21.3. The present sequence represents the DNA encoding GSEF

by detecting Detecting metastatic and potential metastatic cancerous cells, useful for diagnosing, prognosing, grading and staging of cancers by detect gland-specific Ets transcription factor gene product in a biological sample from a cell

Disclosure; Fig 2; 95pp; English.

This invention relates to a method for the detection and determination of the metastatic potential of a cell. The method comprises detecting a gland-specific Ets transcription factor (GSEF) gene product in a test

conver than that in a normal cell, is indicative of a cell with high metastatic potential. The method is useful for determining the metastatic potential. The method is useful for determining the metastatic potential. The method is useful for determining the metastatic potential of a cell, for the diagnosis and prognosis of cancer as well as grading and staging of cancers by detecting GSEF expression in a collogical test sample. The method may also be used to monitor patients having a predisposition to develop a particular cancer. GSEF polypeptides are useful for producing antibodies, in cancer diagnosis, prognosis, grading, staging and management of breast and prostate tumours, and in cetecting polymorphisms in the sequence. GSEF genes and proteins are also useful in gene therapy. GSEF gene product expression levels can be used in conjunction with any tissue in which an alteration in GSEF gene product expression levels is associated with development of a cancer-associated phenotype. Cancers, which can be monitored include cancer-associated phenotype. Cancers, which can be monitored include cancers of the prostate, cervix, lung and colon, melanomas, colorectal adenocarcinomas, Nilm's tumour, retinoblastoma, sarcomas, lung acrcinomas, leukaemia, and lymphomas. The GSEF gene is located on thuman chromosome 6, specifically at 6p21.1-6p21.3. The present sequence

deleted in liver cancer cells. Detecting deletion of this gene, or absence of the expressed protein, indicates increased susceptibility to cancer, or presence of cancer (particularly hepatocallular carcinoma; cancer of prostate, colon/rectum or breast, or adenocarcinoma). The DLC-1 gene, or its cDNA, can be used in gene therapy to replace lost gene function, specifically for treating cancer; and to generate knockout transgenic animals (as in vivo models of carcinogenesis).

Sequence was located 14 nucleotides upstream from the poly(A) tail to 10 nucleotides. The poly(A) tail was present only in a second con 10 nucleotides. The poly(A) tail was present only in a second con 10 nucleotides. The poly(A) tail was present only in a second at difference in the nucleotide sequence for the a subunit was found at three positions when comparison of the cDNA inserts was made in regions where overlapping sequences were obtained. Nucleotides 2038, 2041, and 2727 contained A, C, and T resp. in lambdaHFXIII33.77, while lambdaHFXIII33.82 contained G, C, and A and contained as ame positions. These differences results in a change in two amino acids (11e 680 and Gin 681 to Val and Glu), and could represent a polymorphism that contributes to the microheterogeneity in the a subunit of factor XIII (P.G. Board and M. Coggan, Hum.Genet. 59:135-136).

When cultured the host cells will produce the polypeptide which can be assembled to factor 13, which stabilises blood clots by crosslinking fibrin polymers. Factor 13 is useful therapeutically, e.g. in cases of scleroderma, haemorrhage, ulceratice collitis etc., and can be preped. In large amts. Without risk of viral contamination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          e.g.

                                                                                                                                                                                      or processing signal of AATAAA (the sequence of the noncoding sequence and poly(A) signal are not reproduced). The polyadenylation sequence was located 14 nucleotides upstream from the poly(A) tail of 10 nucleotides. The poly(A) tail was present only in a second clone, designated lambdaHFXIIIa3.82.

Mutant forms of factor XIII were made by in vitro site-directed mutagenesis, esp. ss pRS202 templates were modified by the single primer method, e.g. for TGC-Cys-314 to TCT-Ser exchange.
                                                                                                                                                                                                                                                                                                                                                                                                                         135 tcgtctcaaacatgccctcgagacgtcggtgaagccgtagtttgtacaagactaacaac 194

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAA44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnecary; immunomodulator; antidabetic; antiasthmatic; antithyroid; antiabetic; antiasthmatic; antithyroid; antidametory; antithyroid; antidametory; antiphyroid; antidancerial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antianglogenic. The prosecution in the properties and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and activity and antagonists and antagonists may be also be used in rith exemplification of AAC78457 and AAB44440 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A CONA library was then prepared in Lambda phage gt10. The library was screened with two probes (see AAQ5891 and AAQ3258) based on the sequences of peptide fragments from Factor XIII. One clone (lambda gt10-12) hybridised with both probes and was found to contain a 1704 bp Factor XIIIa sequence with an internal EcoRI site. The two EcoRI fragments generated from the insert sequence (540bp and library for clones extending at both ends compared to lambda gt10-12. The full-length sequence coding for the inactive Factor XIII polypeptide was constructed from the sequences of overlapping clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               135 togtotomameatgococtcgagacgtcggtgmagccgtagtttgtmcamgactmacame 194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes an isolated, purified or recombinant
                                                       macrophage receptor having a collagenous structure, named MARCO (AAM03561). a membrane-bound trimeric protein which probably plays a role in host defence. The gene was isolated from a mouse macrophage cDNA library by screening with human type XIII collagen DNA. An isolated clone was used to rescreen the library, yielding MAF.6. The DNA or its fragments can be used to produce recombinant cause disease), or to correct defects in the MARCO gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; chromosome 13; G713; chromosome 13q31-q33; schizophrenia; blailelic marker; polymorphism; central nervous disease; detection; neuroleptic; G713 gene expression inhibitor; genotyping; brain disorder; psychiatric disorder; bipolar disorder; ds.

related biallelic marker. (I) has neuroleptic activity and can be used as a G713 gene expression includes a G713 or chromosome 13431-433 related biallelic marker. (I) has neuroleptic activity and can be used as a G713 gene expression inhibitor. (I) can be used genotyping to estimate the frequency of an allele of a G713 or chromosome 13431-433 related biallelic markers in a population, and of a haplotype for a set of ballelic markers in a population. (I) is also useful in detecting an association between a penotype and a trait. The frequency is used for detecting an association between a genotype and a trait being solizophrenia. The genotype is used to determine whether an individual is at risk of developing schizophrenia (I) can also be used as a medicament against several disorders preferably brain, psychiatric disorders such as schizophrenia and bipolar disorder. Early and/or prophylactic treatment. AAA55664 to AAA55966 represent human G713 genomic DNA sequences; AAA5567 encodes the human G713 genomic DNA sequences; AAA5567 encodes the human chromosome 13431-433 locus biallelic markers A12 to A4A56090 represent human chromosome 13431-433 locus AAA56031 represent PCR primers used in the exemplification of the present

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AAX19249 to AAX19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAX02956-X03048 and AAX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL·1ra. Such fragments are used in the method of the invention which describes the isolation of a novel human TANG0-77 encoding nucleic acid and protein. Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammarion by binding to the interleukin-1 receptor (IL·1R). It may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tango-77; human; IL-1ra; cytckine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                              Gaps

Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein. Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (IL-IR). It may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psorlasis and inflammatory bowel disease. It may also induce or suppress interleukins,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tango-77; human; IL-1ra; cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of

No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTS sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dr primed CDNA ilbraries. Such ESTS are not well suited for isolating CDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer by sequences have been obtained, the full 5' OFTR is rarely included. 5' ESTS are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used they are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequence tag; secreted protein; cDNA isolation;

```
The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs 5' ESTs are also used in diagnostic, forenisic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                    ï

antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to the isolation of genes AAA59108-A59156 encoding 49 human secreted proteins AAI28012-B28660. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc portion (5EQIDI) for increasing the stability of the fusion protein as compared to the human protein only. The genes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel nucleic acids encoding 49 human secreted proteins useful for treating cancers, hyperproliferative disorders, inflammatory disorders, neurological disorders and cardiovascular disorders
production, isolation and purification of larger amounts of GGPP synthase in plants. GGPP synthase is useful in obtaining expression or enhanced expression of GGPP and other diterpenes, such as paclitaxel, useful as anticancer drugs. Isolated nucleic acids encoding GGPP synthase or hybridising with GGPP synthase encoding nucleic acids are used for identifying genes encoding GGPP synthase from microorganisms such as Taxomyces andreamee and Penicillium raistrickii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1401 gagccaaggaagagctgtcatcctttgatcagataaaggctgcacctttgttgggtcttg 1460

                                                                                                                         25-MAY-1
        proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ani)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune hamblytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collisis; (c) carditovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as wycerafial anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                 1 gggtccacgggcccttatgtatgcaggagcgcctagtgggtcatctgaaggaaaggacaa 60

The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being produced by a plant.
                                                                                                                                                                                                                                                                        105 aatggaaaacagtccctgcccttttgagggtcgtctcaaacatgcccctcgagacgtcgg 164

The invention relates to a method for identifying DNA encoding proteins imparting environmental stress resistance. The method comprises inserting cDNA from a library originating in a salt-resistant organism into a host cell, culturing the transformants under conditions in which the untransformed host does not grow well, and selecting for viable clones. The method is useful for obtaining DNA encoding environmental stress resistance, can be used in the production of plants resistant to environmental stress, which can be used in the production of plants resistant to environments such as deserts, salt damaged ground, cold regions and the oceans. They can be used for increasing the area of land covered by green
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening method to obtain DNA encoding environmental stress resistance factor, useful for producing transgenic plants resistant to environmental stress -

Recombinant laminin 5-expressing cells are used to accelerate wound healing, especially diabetic foot ulcers, venous ulcers, pressure sores, skin surgery, burns, acute wounds, skin grafts, corneal ulcerations, gastro-intestinal ulcers, periodontitis, and gingivitis. They are also used to improve the blocompatibility of medical devices, and to promote cell adhesion to a surface. They can be used for the ex vivo treatment of Type I diabetes. Laminin can also be used to regulate anglogenesis. The cell line produces and secretes recombinant heterotrimeric laminin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Laminin 5-expressing cells, used to accelerate wound healing associated with diabetic foot ulcers, venous ulcers, pressure sores, skin surgery, burns, acute wounds and skin grafts
plants, and desert greening and afforestation, in order to counter the
                   effects of the increase in atmospheric carbon dioxide concentration. Ferimers AAF74219 and AAF74220 are used in an example illustrating the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes a laminin 5 chain polypeptide. Recombinant laminin 5-expressing cells are used to accelerate wound healing, especially diabetic foot ulcers, venous ulcers, pressure sores, skin surgery, burns, acute wounds, skin grafts, corneal ulcerations, gastro-intestinal ulcers, periodontitis, and gingivitis. They are also used to improve the blocompatibility of medical devices, and to promote cell adhesion to a surface. They can be used for the ex vivo treatment of Type I diabetes. Laminin can also be used to regulate angiogenesis. The cell line produces and secretes recombinant heterotrimeric laminin, whereas prior art cell lines have been created that produce but do not secreted only one or two chain laminins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           associated

The present sequence encodes one of 32 novel human secreted polypeptides. The nucleic acid molecules and polypeptides they encode may be used in the nucleic acid molecules and treatment of diseases such as immune disorders (e.g. multiple sclerosis, systemic lupus erythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases of Scimitar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic disorders (e.g. corneal graft neovascularisation and diabetic retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and Alzheimer's disease and Parkinson's disease), infectious diseases and vor for promoting wound healing, regeneration and/or chemotaxis. The nucleic acid molecules may be used to produce the secreted polypeptides. They may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples. The polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63246 to AAB63742 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                       Human gastric cancer associated antigen nucleotide sequence SEQ ID:288.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
